

Wellbutrin (SR/XL) (bupropion)

What is it usually prescribed for?

Major depressive disorder, seasonal affective disorder, nicotine addiction, and other conditions.

How does it work?

Wellbutrin helps control feelings of sadness and cravings for nicotine. Wellbutrin is thought to help balance the brain chemicals dopamine and norepinephrine.

What should I expect?

It may take a few weeks for you to feel the full benefits of taking this medicine. Sleep, energy, or hunger may improve within the first 1–2 weeks. Sadness and lack of interest in activities may need up to 6–8 weeks to improve fully.

Your healthcare professional will start with a low dose that is slowly increased to find the best dose that works for you. Tell your healthcare professional how it's working for you and if you have any side effects so the dose can be changed if needed.

WHEN WILL I FEEL BETTER?

Take Wellbutrin exactly as prescribed to get the full benefit of this medicine.

Will I have side effects?

You may or may not have side effects when taking Wellbutrin. Most side effects improve over the first week or two of treatment.

Wellbutrin can cause an increase in blood pressure, so your healthcare professional may check your blood pressure before starting treatment and during treatment occasionally.

What are common side effects and what can I do to feel better?

If your side effects are mild, talk to your healthcare professional about them at your next appointment.

	Drink plenty of water	Drink less caffeine and alcohol	Do more exercise	Healthcare professional suggestion
Headache	X	X	X	
Dry mouth	X	X		
Trouble sleeping		X	X	
Nausea	X	X		
Feeling dizzy	X	X		
Constipation	X		X	

Note: This is not a complete list of side effects; other side effects are possible. Before starting Wellbutrin, tell your healthcare professional about all the medicines you are taking to avoid unexpected side effects.

Wellbutrin (SR/XL) (bupropion)

YOU'RE NOT ALONE!

In 2018, Wellbutrin was prescribed nearly 24.5 million times in the United States.

What should I avoid?

Don't start any new medicines, over-the-counter drugs, or herbal remedies without talking to your healthcare professional first. There are many interactions with medicines that may increase your chance of side effects.

Do not suddenly stop taking Wellbutrin unless your healthcare professional has told you to, because it can cause mild-to-moderate agitation and irritability.

Use less alcohol and recreational drugs. They may decrease the benefits of Wellbutrin and increase the chance of seizures.

WHAT IS MOST IMPORTANT TO REMEMBER

-  It may take up to a few weeks for you to feel the full benefits of taking this medicine
-  Tell your healthcare professional about any troubling side effects so that you can work together to address them
-  Do not suddenly stop taking this medicine unless told to do so by your healthcare professional
-  Don't start any new medicines, over-the-counter drugs, or herbal remedies without talking to your healthcare professional
-  Get medical care right away if you have serious side effects

When should I call a healthcare professional right away or visit the emergency room?

If you have any **serious** side effects. Here are some examples of serious side effects:

- Thoughts of suicide or are planning to hurt yourself
- Racing thoughts, decreased need for sleep, unusual risk-taking behavior
- Blurred vision, tunnel vision, eye pain or swelling, or seeing halos around light
- Fast or irregular heart beats
- Confusion, unusual changes in mood or behavior
- Seizure (convulsions)

If you think there has been an overdose, call your poison control center (800-222-1222) or get medical care right away.

Where can I get more help?

National Alliance on Mental Illness (NAMI) – [nami.org](https://www.nami.org)

National Suicide Prevention Lifeline – Call 1-800-273-TALK (8255)

Crisis Text Line – Text “HELLO” to 741741
